

# SASE

(Secure Access Service Edge)

## It's your ally in the cloud and at the edge

### Leverage the cloud with confidence

Too often we're told that security in the cloud and at the edge means compromising on the user experience. But what if there were a better way?

# 51%

OF ORGANISATIONS HAVE

**CORE WORK APPLICATIONS**

IN THE CLOUD

# 38%

OF IT EXECUTIVES STRUGGLE WITH

**PERFORMANCE ISSUES**

FOR WORKLOADS MIGRATED TO THE CLOUD

# 27%

OF BUSINESSES ENCOUNTERED A **SECURITY BREACH**

# 23%

WERE DUE TO **CLOUD INFRASTRUCTURE SECURITY MISCONFIGURATIONS**

## The cloud without compromise

Aruba's SASE solution directly supports improved performance in the cloud and at the edge, while bringing deeper zero-trust security and data loss prevention (DLP) to protect the environment. It's the true cloud-native solution for the future of cloud computing.

### EMBRACE BEST PRACTICE CLOUD SECURITY

#### Zero Trust is the only way to approach the cloud

- Treat all users, devices, and applications as potentially untrusted until proven otherwise.
- Reduces the attack surface and minimise the risk of data breaches.
- Benefit from granular access controls based on user identity, device health, and contextual data.

### COMPREHENSIVE SECURITY POSTURE

#### Aruba SASE's holistic security features include

- Zero Trust Network Access (ZTNA)
- Secure Web Gateways (SWG)
- Cloud Access Security Broker (CASB)
- Data Loss Prevention (DLP)

### SCALABLE AND AGILE NETWORK INFRASTRUCTURE

#### Grow with confidence in the cloud

- Truly eliminate the need for on-premises hardware and appliances.
- Reduce operational complexities and costs.
- Quickly adapt to changes in network requirements, such as remote work, cloud adoption, and expanding user bases, without compromising security or performance.

### IMPROVED USER EXPERIENCE AND PERFORMANCE

#### Make sure you're getting the full productivity benefits of the cloud

- Optimise application delivery and provide direct, secure access to cloud resources.
- Eliminate the need for traffic backhauling and leveraging intelligent routing algorithms.
- Improve application performance and reduce latency for end-users.

## Speak to a SASE specialist today

Lexel, HPE Aruba's partner of the year, are experts in deploying SASE. Get in touch to discuss how we can help you take full advantage of the cloud and the edge.
